DETAILED ACTION

1. Claims 1-22 have been examined.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter that the applicant regards as his invention.

3. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Where applicant acts as his or her own lexicographer to specifically define a term of a claim contrary to its ordinary meaning, the written description must clearly redefine the claim term and set forth the uncommon definition so as to put one reasonably skilled in the art on notice that the applicant intended to so redefine that claim term. *Process Control Corp. v. HydReclaim Corp.*, 190 F.3d 1350, 1357, 52 USPQ2d 1029, 1033 (Fed. Cir. 1999). The term "prefetch operation" within independent claim 1, and correspondingly "prefetched data" within some of its dependant claims; which appears to used to refer to "a time-division de-multiplex data operation and/or correspondingly de-multiplex data", while typically accepted to mean "a speculative request for data in anticipation of its potential requirement, or the data resulting from such a request". The term is indefinite because the specification does not clearly redefine the term.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-22, are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al. (US App. 10/750,602).

As per claims 1-22, regardless of their above cited ambiguity, the disclosure appears to be limited to disclosing a semiconductor device comprising a multi-phase synchronous time-division data de-multiplexing circuit predominantly itself comprising that acknowledged as "prior art" in figure 3 of the same disclosure, and simply extended in an analogous fashion as taught by the same said prior art; therefore such a circuit is correspondingly considered obvious to one of ordinary skill in the art at the time of the claimed invention, for the benefit of enabling synchronous multi-phase de-multiplexing of correspondingly multiplexed data as may be desired.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul W. Schlie whose telephone number is 571-272-6765. The examiner can normally be reached on Mon-Thu 8:00-6:00.
